

UKAS Laboratory Legionella Testing

Accurately test your water for contamination from Legionella bacteria and other dangerous micro-organisms with our confidential UKAS accredited laboratory services. Our expert lab tests will tell you if your water meets current legal standards.

The periodic testing of water for Legionella bacteria is a valuable way of demonstrating to the safety regulators, clients, colleagues and other stakeholders that adequate control over your water systems is being achieved and that levels of Legionella bacteria are kept within safe limits.

Using UKAS laboratory culture techniques, test results are available in 10 to 12 days. For faster results, consider using our LegionellaFast, rapid legionella tester.

Key Features

- Discover if your water is safe or dangerously contaminated
- UKAS accredited legionella testing results you can rely on
- Health & Safety Executive ACOP L8 compliant
- Free sterilised sample bottles
- Simple, easy to follow instructions
- Courier collection arranged by us
- Accurate results in 10 to 12 days
- Test certificates provided
- Expert post testing support

What's Included?

- UKAS laboratory legionella test
- Sterilised sample bottle per test
- Full sampling instructions and labels
- Courier collection
- Certificate of analysis

Other Tests

- Pseudomonas
- Coliforms
- E.coli
- Total Viable Counts (TVCs)
- Enterococci
- Staphylococcus aureus
- Moulds & Fungi
